Result® recycled

Let's talk about PRISM

You can neither see nor feel that the **PRISM PU RANGE** is made of recycled polyester - but the ENVIRONMENT can.

The fabric's woven base is manufactured from recycled plastic, polyester and PET bottles. The result is quality rainwear fully comparable to traditional rainwear, but with a significantly reduced environmental impact.

In addition, the rainwear has a classic timeless design and supple fabric feel, and available in colours that never fall out of fashion. It is functional and can be used for many occasions, the water resistance is 3000 mm, has welded seams, quality waterproof zipper, good ventilation and reflective bands.

Converted, it takes about 12 plastic litre bottles to produce one PRISM rain jacket, and about 7 plastic bottles for a pair of PRISM rain pants (14 and 8 to produce the Heavy Duty Safe & Dry set).

A PRISM rainwear set from **RESULT RECYCLED** covers your need for rainwear for many years to come, helping reduce environmental impact.

for people and planet
